23rd Oct 2017
Heart and Kidney Care for Patients

A public involvement day for heart patients
The University of Liverpool and Liverpool Heart and Chest Hospital present this exciting programme showing how recent advances in medical technology can help patients manage their heart conditions and keep healthy. Meet the researchers involved and learn more about how you can impact future research in health technology! Everyone is welcome, and are asked to simply turn up on the day.

How can advances in technology affect your treatment?

Learn about heart failure and its role in kidney health

A chance to get involved with patient research

Have your say: how can technology research help you?
