NHS Foundation Trust

Board of Directors (Public)Item

Subject: LHCH Monthly Staffing for Reporting Period for September 2019

Date of meeting 26th November 2019

Prepared by: Jo Shaw, Divisional Head of Nursing & Quality for Clinical Services, Julie Roy, Interim Divisional Head of Nursing & Quality for Surgery

Karen Wafer, Divisional Head of Nursing & Quality for Medicine

Presented by: Sue Pemberton, Executive Director of Nursing & Operations

Purpose of Report For Noting

BAF Ref	1.1, 1.2
Impact on BAF	None

1. Executive Summary

The National Quality Board (NQB) publication Supporting NHS providers to deliver the right staff, with the right skills, in the right place at the right time: Safe, sustainable and productive staffing (2016) outlines the expectations and framework within which decisions on safe and sustainable staffing should be made to support the delivery of safe, effective, caring, responsive and well-led care on a sustainable basis. It builds on National Institute for Health and Care Excellence (NICE) guidelines on safe staffing for nursing in adult inpatient wards, and is informed by NICE's comprehensive evidence reviews of research, and subsequent evidence reviews focusing specifically on staffing levels and outcomes, flexible staffing and shift work. The need to consider the wider multidisciplinary team when looking at the size and composition of staff for any setting is highlighted as important within these documents.

The nursing establishment is defined as the number of registered nurses, registered nursing associates, assistant practitioners and healthcare assistants who work in a particular ward, department or team. Decision-making to ensure safe and sustainable staffing must follow a clear and logical process that takes account of the wider multidisciplinary team. Although registered nurses, registered nurse associates and healthcare assistants (HCAs) provide a significant proportion of direct care, other groups to consider include:

- Medical staff
- AHPs
- Pharmacists
- Advanced clinical practitioners
- Volunteers

The Model Hospital dashboard makes it possible to compare with peers using care hours per patient day (CHPPD). Finding peers that are close comparators is important as aspects such as patient acuity, dependency, turnover and ward support staff will differ. While NICE guidance identified evidence of "increased risk of harm associated with a registered nurse caring for more

than 8 patients during the day shifts", it clearly states that there is "no single nursing staff-to-patient ratio that can be applied across all acute adult inpatient wards". NHSI state that they have found no new evidence to inform a change to this statement (NHS Improvement Evidence Review One 2016). This report details planned and actual nurse staffing levels for the month of September 2019, including any red flag concerns. All shifts were reported as safe during the month.

The Trust recently held a recruitment day for registered nurses. Recruitment numbers were much lower than previous and the Trust has noticed a decline in applications. A full review of vacancies/sickness/maternity leave is being undertaken currently to review what improvements need to be made to our recruitment processes and our retention of registered nurses. This review will include a review of our approach to associate nurses and our plans for apprenticeships in nursing.

2. Exceptions

All planned staffing for nursing in LHCH is assessed as required for the ward to run at full capacity, if capacity is reduced then the planned staffing changes accordingly. In September 2019;

- There were no red flags on Cedar, Oak and Elm wards. Across the surgical wards, staffing was reduced appropriately due to reduced bed occupancy at times. Cross divisional staff movement ensured that all shifts were reported as safe.
- There were some shifts on Cherry and Maple wards with only 1 RN; however all of these shifts were supported by an RN working flexibly across both areas, or by an experienced Assistant Practitioner. No red flags were reported and all shifts were reported as safe.
- Rowan Suite was intermittently open throughout September. Staff supported areas across the divisions as required and staffing was allocated according to the level of both private and NHS patient activity.
- HDU was open for one 24hr period only in September.

3. Summary

All shifts have been reported as safe. Each day a review of staffing takes place Trust wide to ensure that all patients can be cared for safely. This does, however, result in staff moves on occasion to manage risk and to provide additional support for areas where acuity of patients is higher. The ward manager weekend rota continues with a ward manager working each weekend to support the hospital co-ordinator in ensuring safe staffing across all areas.

4. Recommendations

The Board of Directors are requested to:

- Receive assurance related to nurse staffing for in-patient wards, as per national directives, noting actions being taken to ensure patient safety and quality of care are maintained.
- Receive assurance that staffing is appropriate and is flexed according to patient need and patient safety risk assessments, following escalation processes.
- Receive monthly reports of staffing at all planned board meetings.
- Receive the Care hours per patient day (CHPPD) data

Appendix 1 Introduction to Care Hours per patient Day (CHPPD)

One of the obstacles to eliminating unwarranted variation in nursing and care staff deployment across the NHS provider sector has been the absence of a single means of recording and reporting deployment. Conventional units of measurement that have been developed previously have informed the evidence base for staffing models,— such as reporting staff complements using WTEs, skill-mix or patient to staff ratios at a point in time, but it is recognised by Nurse leaders may not reflect varying staff allocation across the day or include the wider multidisciplinary team. Also, because of the different ways of recording this data, no consistent way of interpreting productivity and efficiency is straightforward nor comparable between organisations.

To provide a single consistent way of recording and reporting deployment of staff working on inpatient wards/units we developed, tested and adopted Care Hours per Patient Day (CHPPD).

- CHPPD is calculated by adding the hours of registered nurses to the hours of healthcare support workers and dividing the total by every 24 hours of inpatient admissions (or approximating 24 patient hours by counts of patients at midnight)
- CHPPD reports split out registered nurses, registered & unregistered nurse associates and healthcare support workers to ensure skill mix and care needs are met. (The system calculates this automatically)
