

**Reference Number:** FOI2021/091  
**From:** Private Individual  
**Date:** 19 March 2021  
**Subject:** Structured Judgement Reviews since Jan 2020 and in Relation to Covid -19

Q1 Please can you tell me how many Structured Judgment Reviews (SJRs) the trust has carried out since 1st January 2020 and how many of these reviews involved the death of a patient with hospital acquired covid.

What was the outcome of the SJRs (or SIs, if the SJR system is not used). For each SJR please give a brief summary of outcome e.g. any particular processes that were changed, any conclusion as to what went wrong).

If the trust does not use the SJR method, please can you give me the numbers for the equivalent method you use e.g. a Serious Incident.

For the avoidance of doubt, when I refer to hospital-acquired covid I am referring to both probable cases (a positive test 8-14 days after admission) and definite cases (testing positive 15 days or more after admission).

A1 For LHCH mortalities form 1st January 2020 to 31st March 2021, there have been 47 SJR's, of which seven involved a nosocomial Covid infection.
