Blood Transfusion – Medical Staff

This eLearning package applies to the following medical staff only and is a mandatory element of their two yearly update:

- Anaesthesia Medical Staff
- Cardiology Medical Staff
- Surgery Medical Staff

The eLearning package for Blood Transfusion can be accessed via [Learnpro](#).

If you are accessing the system for the first time, you will need to register and follow the guidance on the [support section](#).

The following modules must be completed:

- Consent for Transfusion
- Acute Transfusion Reaction
- Module 1 -Safe Transfusion Practice
- Module 2 - Blood Components and Indications for Use

Revalidation option process:

The Safe Transfusion Practice course has a 'Revalidation' option designed for staff that have already completed and passed Safe Transfusion Practice on at least one previous occasion.

The Revalidation option uses short scenarios based on the transfusion process to assess knowledge. As the learner works through the scenario they will be asked multiple choice questions based on the information that is presented.

The learner must feel confident in their knowledge and understanding of Safe Transfusion Practice before undertaking this option.

When launching each of the Safe Transfusion Practice course units, the learner will be asked to choose whether they wish to complete the full unit or the Revalidation option.

NOTE! The learner must answer each question correctly and gain 100% in order to pass.

If the learner answers a question incorrectly they will be unable to continue. They will be advised to review the learning material for that unit and sit the main assessment again to ensure that their knowledge is up to date.

The Education Centre will provide a monthly report of completed modules to Clinical Leads
